FOR IMMEDIATE RELEASE

Smile In One, LLC (SiOS™) Unveils Award Winning, Groundbreaking, Fully Registered, Global Patent-Pending Solution in Full-Arch Dental Implant Technology

Location: Boca Raton, FL

Summary: SiOS™ Introduces a Full-Arch Dental Implant System, which offers precision fit, ideal occlusal accuracy, and long-term reliability. Co-founded by Dr. Nilo Hernandez, Johnny Orfanidis, C.D.T. SiOS™ and in collaboration with Dr. Robert J. Miller transforms full-arch restorations for both patients and practitioners with exceptional and proven results.

SiOS™ System Redefines Full-Arch Dental Implants

The SiOS™ team spent over five-years perfecting their Full-Arch Dental Implant System. The System addresses the critical and difficult to manage challenges of full-arch implant dentistry. The System achieves consistent, precise fitment and occlusal accuracy for both temporary and permanent prosthetics. Hernandez states, “SiOS™ represents the next generation in dental implant technology. It’s not just about solving technical challenges; it’s about providing transformative outcomes for patients and simplifying procedures for practitioners. Every aspect of SiOS™ has been meticulously designed to enhance both the practitioner’s experience and patient satisfaction.”

Precision and Innovation at the Core

Despite advancements in dental implant technology, achieving exact occlusal alignment and fit in full-arch restorations has been a persistent challenge for clinicians. SiOS™ addresses this issue with cutting-edge design and functionality, ensuring predictable, high-quality results. Orfanidis states, “This system bridges the gap between clinical expertise and laboratory precision. It’s a collaboration designed to redefine the standards of full-arch restorations.”

Key Features of the SiOS™ System

- **Precise Fitment:** An industry first, in providing exact occlusal alignment for temporary and final prosthetics, reducing post-procedure adjustments.
- **Long-Term Durability:** Extensive testing shows consistent stability of bone levels and prosthetic integrity, with proven success over five years in clinical use.
- **Streamlined Process:** Simplifies the workflow for practitioners, enhancing efficiency while maintaining exceptional results. The System also significantly reduces surgical and chair-time.

Rigorous Testing and Proven Results

SiOS™ has undergone extensive clinical testing, validating its reliability and effectiveness. In trials involving 39 patients (and increasing), the system consistently delivered stable bone levels and

prosthetic integrity. The success of the System is seen beyond three years post-procedure, underscoring the system's durability. "These results validate the transformative potential of SiOS™. Our approach

ensures a level of precision and durability that supports both practitioners and patients for the long term unlike anything else in the market today," said Orfanidis.

Clinical Outcomes Include

- Predictable results across diverse cases.
- Stable prosthetics offering long-term functionality.
- Positive patient feedback on comfort and usability.
- Elimination of unnecessary current steps, such as chairside denture conversions, delivery within 1-2 days, verification jigs, extra chair time (appointments) and much more.
- Completion of cases in nearly half the time and greater profitability with increased efficiency.

Transforming the Experience for Patients and Practitioners

SiOS™ is designed to benefit both practitioners and patients. By reducing complexity and optimizing fit. It also minimizes procedural errors and enhances comfort, ensuring a seamless experience from start to finish. "Patients trust their dentist to provide life-changing solutions, SiOS™ helps to ensure that clinicians can deliver on that promise with precision and confidence," Hernandez added.

Benefits for Patients

- Precise alignment for greater comfort and functionality.
- Durable prosthetics for improved confidence and quality of life.
- A simplified treatment process with reduced discomfort.
- Built in biofilm reducing formulation is standard operating protocols.

Advantages for Practitioners

- Enhanced accuracy reduces chair time and follow-up adjustments.
- Simplified workflows improve efficiency without compromising quality.
- Confidence in delivering consistent, long-term results.

Advancing Full-Arch Implantology

SiOS™ is more than a system—it's a paradigm shift in the field of full-arch implantology. By addressing technical challenges and prioritizing patient outcomes, the System is poised to become a new standard in dental implant procedures. SiOS™ exemplifies our commitment to advancing dental care. As we continue to innovate, the company is expanding with ongoing developments and additional
